iLED™ 7 Surgical Light
The World in a New Light
Intelligent Lighting

Innovative technology is a key factor to consider when improving the OR environment. With its new generation of LED OR lights, Trumpf Medical is once again setting new standards: iLED™ 7 Surgical Light – the LED light that thinks.

At Trumpf Medical, patient safety and ease of use are always primary considerations in the development of new products. In accordance with this principle, the revolutionary technology of our LED OR light enables OR personnel to work under optimum lighting conditions at all times.

The automatic lighting management system uses the latest 3D sensor technology to continuously analyze the surgical area, automatically adapting the lighting conditions and eliminating the need for manual adjustment. In addition, an innovative shadow management system ensures that unwanted shadows, such as those cast by the surgeon’s head, are compensated for automatically. The surgeons are able to concentrate fully on their work, to the full benefit of the patient.
Seven Reasons for Choosing the iLED™ 7 Surgical Light

- The lighting management system automatically maintains the brightness, color temperature and a consistent field size
- The unique shadow management system ensures excellent illumination at all times
- Always flexible due to best-possible lighting conditions at working distances of between 0.8 and 1.3 meters in all disciplines
- Streamlined design for enhanced air flow
- The modular concept allows it to be fitted with a standard handle, sterile operating handle, disposable handle or camera
- An intuitive, practical and adaptable operating concept
- Future-compatible with integration options from Trumpf Medical
SmartControl for Intuitive Operation

All settings on the iLED™ 7 Surgical Light can be entered using a touchscreen mobile tablet or a wall-mounted operating panel. The clearly designed graphic interface enables intuitive operation. Basic functions can also be adjusted directly on the lighthead. A sterile handle is also available as an option, giving the operator the availability to quickly manage selected functions of the iLED™ 7 Surgical Light.

SmartAssist for Active Lighting and Shadow Management

The iLED™ 7 Surgical Light’s sensor-controlled assistance system provides even lighting conditions and eliminates shadows, even when the surgeon is working directly beneath the OR light. The system identifies obstacles in the field of illumination and activates or deactivates individual LED modules accordingly. As a result, the surgical field is properly illuminated without the need for manual adjustment allowing the surgeon to focus on the patient and the task at hand.

SmartDesign for the Highest Demands

The slim design of the iLED™ 7 Surgical Light was developed for the specific requirements of the OR personnel. Not only can the OR light be used in operating rooms with conventional ventilation systems, it is also ideal for rooms with laminar air flow systems. Key design elements include the opening in the center of the light, the rounded lines and the smooth surfaces, which are also easy to clean. A combination of lightweight materials and compact design makes the iLED™ 7 Surgical Light easy to position.
The Smart Features of the iLED™ 7 Surgical Light

All product details on the iLED™ 7 Surgical Light are available at www.trumpfmedical.com/en/iLED7
Smart Illumination for Continuous Light Intensity

If the usual working distance is changed, the 3D sensor in the iLED™ 7 Surgical Light automatically adjusts the light field size and illumination level of up to 160,000 lx. OR Staff is able to work under consistent lighting conditions at all times, without the need for manual adjustment saving time and allowing the surgeon to concentrate on the surgical site.

SmartPattern for Optimal Lighting Field Sizes

Consistent lighting field sizes are available for the commonly required distances in surgery of 0.8 to 1.3 meters. With the unique SmartPattern function, three different sizes are available. After setting the illumination field size, the iLED™ 7 Surgical Light automatically stores the setting even after manual adjustment of the working distance.

SmartModularity for Flexibility at all Times

The uniform handle unit enables the iLED™ 7 Surgical Light to be equipped with a standard handle, sterile operating handle or disposable handle making it adaptable to the current staff requirements. If you purchase the TruVidia™ Wireless Camera now or in the future, it can be connected without the need for modifications.
The TruVidia™ Wireless Camera provides excellent image quality and encrypted transfer provides maximum data security.

The iLED™ 7 Surgical Light can be directly connected to the innovative and delay-free TruVidia™ Wireless Camera System via the handle unit interface, providing brilliant recordings in full HD. Individual images for documentation purposes are possible using the snapshot function. Benefits of wireless technology: ability to install and/or upgrade this system at no additional cost or the need for complex video cabling. In addition, it can be controlled from the mobile tablet or wall-mounted operating panel.

Hill-Rom is a leading global medical technology company with more than 10,000 employees worldwide. We partner with health care providers in more than 100 countries, across all care settings, by focusing on patient care solutions that improve clinical and economic outcomes in five core areas: **Advancing Mobility, Wound Care and Prevention, Patient Monitoring and Diagnostics, Surgical Safety and Efficiency and Respiratory Health.** Our innovations ensure caregivers have the products they need to help diagnose, treat and protect their patients; speed up recoveries; and manage conditions. **Every day, around the world, we enhance outcomes for patients and their caregivers.** Learn more at hill-rom.com.

Trumpf Medical, part of Hill-Rom, is distinguished by high-quality German engineering standards and offers innovative products to improve efficiency and safety in the OR, ICU, and in other clinical environments throughout the care sector. With our customers’ requirements as our benchmark and innovation as the foundation of our success, Trumpf Medical delivers total solutions to fit your clinical care needs.

Not all products/options are available in all countries. For further information about our products or services, please contact your local Trumpf Medical representative or visit our webpage:
