Intelligent Lighting

Innovative technology is a key factor to consider when improving the OR environment. With its new generation of LED OR lights, Trumpf Medical is once again setting new standards: iLED™ 7 Surgical Light – the LED light that thinks.

At Trumpf Medical, patient safety and ease of use are always primary considerations in the development of new products. In accordance with this principle, the revolutionary technology of our new LED OR light enables OR personnel to work under optimum lighting conditions at all times.

The automatic lighting management system uses the latest 3D sensor technology to continuously analyze the surgical area, automatically adapting the lighting conditions and eliminating the need for manual adjustment. In addition, an innovative shadow management system ensures that unwanted shadows, such as those cast by the surgeon’s head, are compensated for automatically. The surgeons are able to concentrate fully on their work, to the full benefit of the patient.
Seven Reasons for Choosing the iLED™ 7 Surgical Light

- The lighting management system **automatically** maintain the brightness, color temperature and a consistent field size
- The **unique** shadow management system ensures excellent illumination at all times
- Always **flexible** due to best-possible lighting conditions at working distances of between 0.8 and 1.3 meters in all disciplines
- **Streamlined** design for enhanced air flow
- The **modular** concept allows it to be fitted with a standard handle, sterile operating handle, disposable handle or camera
- An intuitive, **practical** and adaptable operating concept
- **Future-compatible** with integration options from Trumpf Medical
SmartAssist for Active Lighting and Shadow Management

The iLED™ 7 Surgical Light’s sensor-controlled assistance system provides even lighting conditions and eliminates shadows, even when the surgeon is working directly beneath the OR light. The system identifies obstacles in the field of illumination and activates or deactivates individual LED modules accordingly. As a result, the surgical field is properly illuminated without the need for manual adjustment allowing the surgeon to focus on the patient and the task at hand.

SmartControl for Intuitive Operation

All settings on the iLED™ 7 Surgical Light can be entered using a touchscreen mobile tablet or a wall-mounted operating panel. The clearly designed graphic interface enables intuitive operation. Basic functions can also be adjusted directly on the lighthead. A sterile handle is also available as an option, giving the operator the availability to quickly manage selected functions of the iLED™ 7 Surgical Light.

SmartDesign for the Highest Demands

The slim design of the iLED™ 7 Surgical Light was developed for the specific requirements of the OR personnel. Not only can the OR light be used in operating rooms with conventional ventilation systems, it is also ideal for rooms with laminar air flow systems. Key design elements include the opening in the center of the light, the rounded lines and the smooth surfaces, which are also easy to clean. A combination of lightweight materials and compact design makes the iLED™ 7 Surgical Light easy to position.
The Smart Features of the iLED™ 7 Surgical Light

All product details on the iLED™ 7 Surgical Light are available at www.trumpfmedical.com/en/iLED7
Smart Illumination for Continuous Light Intensity

If the usual working distance is changed, the 3D sensor in the iLED™ 7 Surgical Light automatically adjusts the light field size and illumination level of up to 160,000 lx. OR Staff is able to work under consistent lighting conditions at all times, without the need for manual adjustment saving time and allowing the surgeon to concentrate on the surgical site.

Even lighting at every distance

SmartPattern for Optimal Lighting Field Sizes

Consistent lighting field sizes are available for the commonly required distances in surgery of 0.8 to 1.3 meters. With the unique SmartPattern function, three different sizes are available. After setting the illumination field size, the iLED™ 7 Surgical Light automatically stores the setting even after manual adjustment of the working distance.

For standard working distances, you can select from three preconfigured light field sizes

SmartModularity for Flexibility at all Times

The uniform handle unit enables the iLED™ 7 Surgical Light to be equipped with a standard handle, sterile operating handle or disposable handle making it adaptable to the current staff requirements. If you purchase the TruVidia™ Wireless Camera now or in the future, it can be connected without the need for modifications. You can also combine the OR light with other Trumpf Medical™ devices, such as the innovative TruConnect™ OR Integration System.

Various handles can be fitted to the handle unit for functional flexibility
The TruVidia™ Wireless Camera provides excellent image quality and encrypted transfer provides maximum data security.

The iLED™ Surgical Light is compatible with the innovative TruConnect™ OR Integration System by Trumpf Medical. The management and training system enables you to operate different Trumpf Medical™ OR devices. This comprises lights, tables and cameras – even under sterile conditions. With TruConnect™ OR Integration System, you do not need any other remote control devices.

Compatible with the Latest Generation of Cameras

The iLED™ 7 Surgical Light can be directly connected to the innovative and delay-free TruVidia™ Wireless Camera System via the handle unit interface, providing brilliant recordings in full HD. Individual images for documentation purposes are possible using the snapshot function. Benefits of wireless technology: ability to install and/or upgrade this system at no additional cost or the need for complex video cabling. In addition, it can be controlled from the mobile tablet or wall-mounted operating panel.

TruConnect™ OR Integration System: Intelligently Linked

The iLED™ Surgical Light is compatible with the innovative TruConnect™ OR Integration System by Trumpf Medical. The management and training system enables you to operate different Trumpf Medical™ OR devices. This comprises lights, tables and cameras – even under sterile conditions. With TruConnect™ OR Integration System, you do not need any other remote control devices.

Instead, intuitive, mobile control of the integrated components is possible via the user interface on the tablet, including graphical feedback. The flexible app concept enables the TruConnect™ OR Integration System to be individually extended with the addition of devices and functionalities and combined with other Trumpf Medical solutions.
